DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Burns (US 5,991,306) and in view of Lumley (US 6,588,013).

Considering claim 1, Burns discloses a streaming media publishing system (figure 2) comprising: a content processing center (content server—52 in figures 2) for processing the media content (column 5, line 66 – column 6, line 7 and column 9, line 35-48) to generate a streaming media presentation comprising integrated static HTML pages (since the content server multicasts HTML pages, it inherently generates the HTML pages—column 6, lines 1-7) and encoded video, audio, (the media content has to inherently be formatted/encoded for suitable transmission) and metadata (hyperlinks for hypermedia document to various data items, such as video and audio—column 6, lines 1-7 and column 9, lines 42-50); a satellite for transmitting the streaming media presentation (54 in figure 1 and column 6, lines 22-25); a cache server (72 figure 2) for receiving and storing the transmitted streaming media presentation (column 6, lines 56-65); client personal computers (58 and 60 in figure 2) coupled to the cache server

comprising browser software for accessing the streaming media presentation stored on the cache server and displaying the streaming media presentation (column 6, lines 48-55).

Page 3

Burns further discloses that the processing center (52 in figure 6) serves content in the form of video, audio, and text (column 5, line 66 - column 6, line 1). However, Burns fails to specifically disclose a particular source for the media content.

In analogous art, Lumley discloses a source of media content (14 in figure 1 and column 4, line 66 – column 5, line 18) comprising video, audio, and textual content (column 5, lines 34-35) for distributing various promotional materials to multiple users (column 5, lines 19-35).

It would have been obvious to one of ordinary skill in the art to modify Burns' system to include a source of media content, as taught by Lumley, for the benefit of distributing various promotional materials to multiple users (column 5, lines 19-35).

3. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Burns (US 5,991,306) in view of Lumley (US 6,588,013) as applied to claim 1 above, and further in view of Omoigui (US 2005/0076378).

As for claim 2, Burns and Lumley disclose a streaming media publishing system. Burns and Lumley fail to disclose that the streaming media presentation is

searchable using the metadata integrated with the video and audio.

In analogous art, Omoigui discloses that the streaming media presentation (paragraph 19, lines 1-7) is searchable using the metadata (descriptive presentation information) integrated with the video and audio (paragraph 22, lines 1-7) for the benefit of searching for a particular media presentation (paragraph 22, lines 5-7).

It would have been obvious to one of ordinary skill in the art to modify the combined system of Burns and Lumley to include searchable streaming media presentation using metadata, as taught by Omoigui, for the benefit of searching for a particular media presentation (paragraph 22, lines 5-7).

4. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burns (US 5,991,306) in view of Nagai (US 6,795,092).

With regards to claim 3, Burns discloses a streaming media publishing method (figure 2) comprising the steps of: selectively processing graphics and text associated with a streaming media presentation to create a dynamic hypertext markup language (HTML) page (column 5, line 66 – column 6, line 7) corresponding thereto; processing video and audio (column 5, line 66 – column 6, line 1) to extract metadata associated with the presentation (hyperlinks for hypermedia document to various data items, such as video and audio—column 6, lines 1-7 and column 9, lines 42-50); encoding the video, audio, and metadata in a predetermined format (the media content has to inherently be formatted/encoded for suitable transmission); integrating static HTML

Art Unit: 2611

page with encoded video, audio, and metadata (since the content server multicasts HTML pages: web pages, that links text, audio, and video, and the media content has to inherently be formatted/encoded for suitable transmission, the HTML page is inherently integrated with the streaming media before multicasting—column 5, line 66 – column 6, line 7); transmitting the streaming media presentation comprising the integrated static HTML page and encoded video, audio, and metadata to a remotely located cache server where it is stored (column 6, lines 22-25 and 56-65); accessing and viewing the streaming media presentation using web browser software disposed on a personal computer coupled to the cache server (column 6, lines 1-7 and 48-65).

Burns fails to disclose converting the dynamic HTML page into a static HTML page.

In analogous art, Nagai discloses converting the dynamic HTML page into a static HTML page for the benefit of generating a static digest/summary of a multimedia from a plurality of media data (column 6, lines 39-43 and column 7, lines 50-52).

It would have been obvious to one of ordinary skill in the art to modify Burns' method to include converting the dynamic HTML page into a static HTML page, as taught by Nagai, for the benefit of generating a static digest/summary of a multimedia from a plurality of media data (column 6, lines 39-43 and column 7, lines 50-52).

Art Unit: 2611

Regarding claim 4, Burns and Nagai meet the claimed limitation. In particular, Burns discloses that streaming media presentation is transmitted over a satellite link (54 in figure 1 and column 6, lines 22-25).

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Burns (US 5,991,306) in view of Nagai (US 6,795,092) as applied to claim 3 above, and further in view of Omoigui (US 2005/0076378).

As for claim 5, Burns and Nagai disclose a streaming media publishing system.

Burns and Nagai fail to disclose that the streaming media presentation is searchable using the metadata integrated with the video and audio.

In analogous art, Omoigui discloses that the streaming media presentation (paragraph 19, lines 1-7) is searchable using the metadata (descriptive presentation information) for the benefit of searching for a particular media presentation (paragraph 22, lines 5-7).

It would have been obvious to one of ordinary skill in the art to modify the combined method of Burns and Nagai to include searchable streaming media presentation using metadata, as taught by Omoigui, for the benefit of searching for a particular media presentation (paragraph 22, lines 5-7).

Art Unit: 2611

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Harun M. Yimam whose telephone number is 571-272-

7260. The examiner can normally be reached on M-F 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Chris Grant can be reached on 571-272-7294. The fax phone number for

the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
